[▶ Bierer Meters](#)

New Data Loggers

AEMC recently expanded their data logger line with two versatile models.

The [L452 Process Data Logger](#) records DC voltage, 4-20mA, events and pulse counts. Two independent channels allow users to connect many types of process sensors. The L452 is battery or USB powered and includes 32MB internal flash memory. It communicates via USB or Bluetooth for configuration & data transfer to a PC.

The [CA1510 Air Quality Monitor/Logger](#) simultaneously measures temperature, humidity and CO2 level. It complies with the latest standards for measuring ventilation system air quality and stores up to 1M readings. Recording interval is programmable from 1 minute to 8 hours. Data download is via USB or Bluetooth.

UL Panel Meters

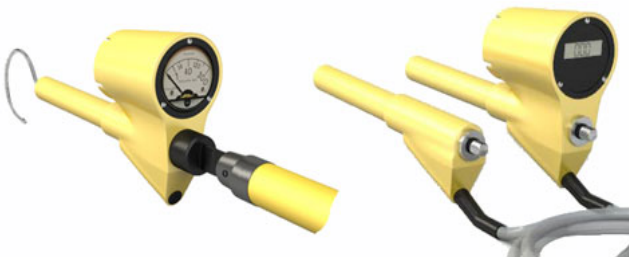

The Texmate [Tiger Series Digital Panel Meters](#) now carry a UL and cUL listing. These intelligent panel meters offer up to 4 input channels and 3 digital displays in a compact DIN case. Over 50 input modules measure voltage, current, frequency, temperature and many sensor signals. Relay and analog outputs can be installed for alarm and control. USB, RS232, RS485 and Ethernet communications provide easy SCADA interfacing.

Bierer Meters

The Bierer Meters product line is now available from Weschler Instruments.

[High Voltage Detectors](#) measure phase to ground voltages up to 1000kV in substation, overhead and underground systems. The [Phasing Voltmeters](#) perform phase to phase voltage sensing and phasing to 800kV. A wireless model eliminates the cable between phase probes.

Both lines are available in analog and digital versions. Bierer meters are field proven and made in USA.
