Marine Instrumentation

Military and commercial vessels rely on Weschler indicators to monitor critical shipboard functions. Our rugged digital, analog and bargraph meters include high-shock and spray tight models in sizes from 2" to 12". We carry Weschler and other major brands, plus a wide selection of sensors, transmitters, testers and accessories. We offer illuminated analog, high brightness digital, and may other options. Custom configurations and scales are made to order.

New Clamp Meters

New products from Amprobe and Flir expand the capabilities of clamp-on meters. The Amprobe **ACD-14-PRO Clamp Multimeter** replaces the popular ACD-14 with a dual display meter that shows voltage and current simultaneously. It measures TRMS AC to 600V & 600A with a low-pass filter for checking motors & VFDs. Additional functions include resistance, frequency, capacitance, continuity, non-contact voltage detection, & Type K T/ C. The Flir **CM174 Imaging Clamp Meter** is a full function multimeter with a built-in thermal imager to visually identify temperature problems. It measures to 1000V and 600A AC/ DC. A narrow jaw and built-in work light facilitate troubleshooting in tight spaces. The CM174 is economically priced with a 10 year warranty.
